## **Beneath the numbers: Gender inequities in undergraduate science courses**

**Prof. Sara Brownell**

School of Life Sciences, Arizona State University, USA

Women are underrepresented in science disciplines, yet often the focus remains exclusively on their representation alone. However, the number of women in a discipline is only one way to consider the inequities of women in science. This talk will introduce other underlying factors that can influence the experiences of women in science and highlight how even if we increase the number of women in science, they still may be underserved.
