

Group Atmospheric Radiation

Solar and IR-Imaging of Stratocumulus at the Acores

Master Thesis:

- Analysis of camera measurements of stratocumulus
- Comparison of IR-images of brightness temperature and solar observations with a digital camera
- Quantification of cloud inhomogeneities from both spectral ranges
- Identification and quantification of 3D radiative effects

Sem. Research:

- climatology of stratocumulus
- cloud top processes linked to cloud inhomogeneities
 - cloud top entrainment of dry air
 - cloud top cooling
- 3D radiative processes

Sem. Methods:

- helicopter-borne cloud observations: IR and solar cameras
- parameters to quantify the cloud inhomogeneity
- advantage of imaging observations compared to hemispherical radiometer (Pyranometer, Pyrgeometer)
